

DuraTec™ Phosphate-Free Pretreatment Chemicals

DuraTec products use next generation zirconium technology to provide superior paint adhesion and corrosion resistance. These phosphate-free products are effective on mild steel, galvanized steel and aluminum substrates.

Cost Savings

DuraTec products provide energy, chemical and water savings through:

- Low operating temperature of ambient to 115°F
- Produces minimal sludge
- Provides a prolonged bath life
- Fewer tank recharges
- Reduces water usage

Benefits and Features

- Easy-to-use
- Easy-to-see coating
- Faster and more complete heavy coating formation
- Nitric acid free
- Effective on ferrous and nonferrous metals
- Environmentally preferred over traditional pretreatment
- Minimizes maintenance requirements
- Heavy metal free

DuraTec 200

DuraTec 200 is formulated to be compatible with E-Coat technologies. It is more forgiving than traditional pretreatment against flash rust during line stoppages.

DuraTec 400

DuraTec 400 is formulated to minimize flash rust common during frequent or extended line stoppages. It provides the best paint adhesion results of all of our pretreatment products.

DuraTec Wand FRP

DuraTec Wand FRP is spray wand chemistry that provides excellent flash rust protection. It has much lower operating temperatures than typical wand pretreatments.
