

Water System Cleaning Products

DuBois Knows Cleaning!

Since 1920, DuBois Chemicals has used a team approach to serve customers across North America. Your cleaning applications will be cared for by our highly trained and experienced representatives.

Multipurpose Acidic

DuBois offers concentrated mineral acid and more-gentle, organic acid based options for your general cleaning and descaling needs.

Our multipurpose acidic products are designed to be used in systems with a variety of iron and copper based metals.

Galvanized-Safe Acidic

Special corrosion inhibitors in these products enable them to safely descale systems with galvanized steel and zinc alloy components.

Heavy-Duty Alkaline

These versatile products are effective in removing oils, greasy soils and organic deposits from industrial and commercial equipment and manufactured parts.

Alkaline Precleaning

Oily residues and soils deposited during the fabrication of piping systems and equipment may be removed using these highly effective, low foaming alkaline blends.

Specialty Cleaners

DuBois also offers specialized cleaning products for zeolite softener resins, RO/UF membranes, boiler boilouts and for oily and rusty systems where a neutral pH cleaner is preferred.

Proven Technology

DuBois products ensure your systems are free of corrosion byproducts, mineral scales, oils and organics.

We utilize premium cleaning technologies including:

- High performance corrosion inhibitors
- Low foaming surfactant blends
- Biodegradable components
- Safe, neutral pH

Versatile Technology

DuBois products are designed to be used in industrial, commercial and institutional facilities to clean up cooling towers, closed loop systems, boilers, process equipment and more.

Analytical Support

Our state-of-the-art analytical laboratory determines the composition of your scales and deposits. This enables us to select the most effective products for your system.
